Site Revamp Plan

Requirements

- **Modernized Interface**: Upgrade the site with a clean, responsive, and interactive design that delivers a modern user experience.

- **Mobile Compatibility**: Ensure seamless accessibility and responsiveness across all devices and screen sizes.

- **Improved Navigation**: Redesign the navigation structure for better user flow, accessibility, and ease of use.

- **Global Footer Integration**: Introduce a consistent footer across all pages to complement the existing navbar.

- **Social Media Integration**: Add clickable social media icons (Facebook, Instagram, LinkedIn, Twitter) that link to official profiles on every page.

- **Persistent WhatsApp Icon**: Include a floating WhatsApp icon on every page for instant messaging. A single click should open a chat to the organization's WhatsApp number.

- **Confirmation Modal for WhatsApp**: Provide an optional confirmation popup before redirecting users to WhatsApp.

- **Reorganized Leadership Section**: Update the leadership section to show a clear hierarchy: **President → Secretary → Members**.

- **Live Location Map**: Embed a live Google Map of the organization's location to make directions easy and improve visibility.

- **Enhanced Donation Form**:

    - Add fields for **name, email, and phone number**.

    - Automatically trigger a personalized **welcome message** after submission.

- **Redesigned Contact Page**: Implement a modern, clean, and responsive design for the contact form.

Additional Requirements

- **File Upload and Viewing Section**:
  A dedicated section where the secretary or authorized personnel can **upload files** (e.g., reports, newsletters, event updates), and users can view or download these files directly from the site.

- **Transition to Full-Stack Development**:
  Since the project now includes file uploading and data handling, it will shift from being **frontend-only** to a **full-stack application**. This will require:

  - **Frontend Development**: For the user interface and responsive layouts.

  - **Backend Development**: To handle file storage, authentication, and secure data processing.

  - **Database Integration**: For storing user data, uploaded files, and other relevant records.

- **User Authentication System**:
  Add a **login and signup system** to manage different user roles, including:

  - **Admins**: For overall site management.

  - **Secretary**: For uploading reports and managing file sections.

  - **Donators**: To sign up and have their details saved for communication, reports, and record-keeping.
